### Describe the present and original (if known) physical appearance

This 2½-story Queen Anne Revival home, designed by Morgantown architect Elmer Jacobs, was built about 1898 at the corner of Spruce and Pleasant Streets in downtown Morgantown. It has undergone only minor alterations and is being restored by the current owners. The house is built in running bond brick, with a foundation of cut stone, a stone water table and stone sills and lintels. The main roof is a hip and cross gable with a gable roof over the rear wing of the house. The ridge of the hip roof is crested with iron finials. The prominent features are the 3-story tower, the ornate wood porches, stained glass windows and elaborate interior woodwork in oak and curly maple.

There are five chimneys in the house with ornate brickwork common to Morgantown at the turn of the century. The brick arches over the arched windows and at the two-story side portico are made from molded bricks which project forward from the surrounding surface.

The Spruce Street west facade is the main facade and features the 3-story octagonal tower capped with an iron finial. The original woodwork is intact although the roofing is now asphalt shingle. An old photograph indicated the original roofing to be slate. The hip dormer is faced with cut wood shingles. A palladian window, with square side sash and 1/1 double-hung lights with arched top sash, is centered in this dormer. An arched pattern of contrasting cut and color shingles surrounds the center window, while an angular bond of shingles goes across the bottom of the dormer. The windows on the second floor are 1/1 double-hung with stone sills and lintels. The wall surface containing the entrance doors on the first floor and one double-hung window on the second floor is recessed between the tower and the remaining part of the facade. The resulting overhang is supported by a wooden doric column. This provides access to the porch roof. The main window on the first floor is a large fixed light with arched stained glass light above. The tower windows on the first floor are 1/1 double-hung. An aluminum and glass vestibule has been added but will be removed during the restoration. The wooden porch covers the entire width of the facade. The woodwork is rotted and deteriorated in many places; however, enough remains that the detailing can be duplicated. The wooden doric columns rest on stone piers with wood lattice infill between. The steps are concrete but will be replaced with wood during the restoration. A wooden balustrade connects the columns, and an old photograph indicates the second floor porch has a wooden balustrade with square balusters above the first floor columns. This balustrade will be rebuilt.

The Pleasant Street south facade is capped with a hip dormer with window and shingle details identical to the Spruce Street facade. The main stair is articulated on this facade with a pair of small casement windows lighting the bath under the first landing, a large

Page 2

rectangular light at the first landing and an arched stained glass light at the second landing. The rectangular light, originally stained glass, has been located and is being repaired. The main room on the first floor has a large rectangular fixed light between two tall narrow 1/1 double-hung windows. This entire assembly is capped with an arched stained glass light. The second floor has two 1/1 double-hung windows. A wooden porch fills in the space between the rear wall of the main part of the house and the 2½-story projecting section. The detailing is similar to the front porch but has square columns, and an old photograph reveals a second floor balustrade used to exist. The porch will be repaired and the second floor balustrade rebuilt.

The main features of the north facade are the gable dormer with sidewalls, the brick chimney, the 2-story brick portico and the projecting rectangular bay. The gable of the dormer is of cut shingles with an elliptical lunette in the center. There is an elliptical pattern of shingles around the lunette. The front wall of the dormer contains three fixed sash windows with arched transom lights. Half-round wood pilasters frame the windows. The second floor has 1/1 double-hung windows. A wood balustrade spans between the brick piers of the portico. A large air conditioning condensing unit is currently on the porch roof but will be eliminated. The projecting bay has tall fixed sash windows with rectangular stained glass transom lights, stone sills and lintels. The roof of the porch is supported by square wooden columns, and two bays are filled in with full height diagonal lattice. The remaining windows of the first floor are 1/1 double-hung.

The rear east facade of the projecting wing of the house has a simple gable roof. The gable is of cut shingles with an arched top 1/1 double-hung window. An arch of contrasting color and cut shingles surrounds the arched top. The second floor 1/1 double-hung window has a stone sill, but the head is tight to the underside of the frieze board. The first floor has a pair of 1/1 double-hung windows with a continuous stone lintel and sill.

The interior has had some alteration on the first floor, but the second floor and attic remain nearly intact. The previous owners were careful to keep the original doors, trim, mantels, etc. that were removed during alteration. Each of the rooms in the main part of the house on the first and second floors has a tile fireplace with ornately carved wooden mantel. A beautiful oak staircase leads up from the entry hall and has stained glass at the landings. The room adjacent to the entry hall has an

existing pair of pocket doors plus a set of pocket doors that were removed. Both pairs are oak on one side and curly maple on the other side. The previous owner had subdivided the room with the projecting bay into two examining rooms. These partitions will be removed, the window casing stripped and refinished and the mantel reinstalled. This will become the conference room for the current owners. The room in the rear projecting wing of the house was used for treatment. The casework and paneling will be removed, but the suspended ceiling and lighting will remain for the new secretarial area. The upstairs rooms retain their high ceilings. The wallpaper is being stripped and the plaster repaired. The room above the conference room is being subdivided into two small offices. The existing bathroom is being modified to make room for for a library in the rear wing of the house. A powder room and furnace room are being added to the third floor for future expansion.

**Specific dates** 1898 **Builder/Architect** Elmer F. Jacobs, Architect

### Statement of Significance (in one paragraph)

The Cox house is significant architecturally as an example of Morgantown architect Elmer F. Jacobs' work, as one of the best examples of Queen Anne Revival architecture in the city and as one of the key buildings in downtown Morgantown, which has remained relatively unchanged over the years. It also has historical significance since it was the home of Judge Frank Cox, a prominent lawyer who served as prosecuting attorney and Judge of the Supreme Court of Appeals of West Virginia. He was also a major civic leader and prominent property owner. Elmer Jacobs came to Morgantown in 1893 from Pittsburgh and quickly established himself as the city's leading architect at a time of rapid expansion in the city's growth, retaining this position until his death in 1945. He specialized in residential work, building in both Queen Anne Revival and Neo-Classical Revival styles, but also built the post office building (in National Register), Seneca Glass Works, the additions to West Virginia University's Woodburn Hall, and several downtown commercial buildings.

Frank Cox was born the only child to Henry L. Cox and Elizabeth Matilda (Boydston) Cox on his father's farm on June 18, 1862 in Grant district, Monongalia County. He attended the area schools during his youth and received his formal training at West Virginia University, graduating in June 1883 with his degree in law. He set up his law practice in Morgantown. His first office was located in Court House Square. He practiced alone until 1888 when he formed a partnership with George C. Baker. That same year Cox was elected prosecuting attorney on the Republican ticket to finish out the remainder of W.W. Houston's term of office; Houston had unexpectedly resigned due to health problems. At the time he was elected to finish out Houston's term, he was also elected for the following full term of four years. Upon being elected P.A., Cox appointed Baker as his deputy assistant. Cox was then succeeded by his partner George C. Baker, who then appointed Cox as his deputy. In 1904, Cox was elected Judge of the West Virginia Supreme Court of Appeals. In 1907, he was chosen President of the Court. Later that year, he resigned from office and returned to Morgantown to resume his private law practice, re-establishing the firm of Cox and Baker, a general law firm specializing in oil, corporation, and chancery litigation.

Frank Cox also held other prominent positions. He served as judge advocate general with the rank of brigadier under Gov. Atkinson. He was a member and Vice President of the Board of Trade of Morgantown in the 1900's. He was interested in the city's growth and development since he was a large owner of area real estate. He was a member of the World's Fair Commission for West Virginia in 1904. He was a member and trustee of the Methodist Episcopal Church. During WW I, he was active and influential both publicly and personally. He served as

the chairman of the 2nd Liberty Loan drive in Monongalia County. Judge Cox also served for a number of years as a member of the school board. He was a member of such clubs as the Masons, Odd Fellows and Modern Woodman of America.

Frank Cox died testate on September 18, 1940 in Monongalia County, West Virginia. According to his will, as recorded in Will Book No. 16 Page 161, he left "all the rest and residue of his property, real and personal and mixed, to his son, Stanley R. Cox, and to his daughter, Margaret Cox Cowell, equally, share and share alike, that is, to each an undivided one half( $\frac{1}{2}$ ) thereof."

Stanley R. Cox, Sr. died intestate on Dec. 6, 1949. The ownership of the house then went to his heirs, his widow, Esther J. Cox, his daughter, Elizabeth J. Cox Owens, and his two sons, Stanley R. Cox, Jr. and Frank G. Cox (See Estate Bk. No. 70 Page 495)

Margaret Cox Cowell conveyed her one-half interest in the Cox house to Frank G. Cox, Elizabeth Cox Moran(now Owens) and Stanley R. Cox, Jr. by deed dated November 10, 1960 and is recorded in Deed Book 591 Page 187.

Stanley R. Cox Jr. died intestate on July 11, 1965 and his interest then, following a civil suit went equally to Frank G. Cox and Elizabeth Cox Moran(now Owens) on May 18, 1967 as recorded in Deed Book 666 Page 1.

Frank G. Cox died intestate on August 24, 1981 and by the terms of his will, his interest went to his long time physician, Dr. Margaret Stemple Zeck. This transaction is recorded in Will Book 52 Page 342. Esther J. Cox, Stanley R. Cox Sr.'s widow, died on Sept. 7, 1981. The Cox estate was sold jointly by Margaret Stemple Zeck and R. Alex Zeck, her husband(Deed Book 881 Page 533) and Elizabeth Cox Owens and her husband John J. Owens (Deed Book 881 Page 539) to the present owners John P. Ball and Robert Dinsmore.

The Cox house was continuously owned by the Cox family, but they rented it out periodically over the last 40 years. In 1941, it was rented out to West Virginia University and served as the WVU faculty club. From 1954-1955, it was rented out to Velma Gene Dalton who ran the Morgantown Beauty School there. In 1960, it became the Mancinelli Funeral home. Later it was rented out to Dr. Margaret Stemple Zeck who had her offices there. Now the Cox house is being remodeled to house offices for Ball and Dinsmore, Attorneys-at-Law.
