## 8. Statement of Significance

### Applicable National Register Criteria

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ **B** Property is associated with the lives of persons significant in our past.
- ☒ **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ **D** Property has yielded, or is likely to yield, information important in prehistory or history.

### Criteria Considerations

Property is:

- ☐ **A** owned by a religious institution or used for religious purposes.
- ☐ **B** removed from its original location.
- ☐ **C** a birthplace or a grave.
- ☐ **D** a cemetery.
- ☐ **E** a reconstructed building, object, or structure.
- ☐ **F** a commemorative property.
- ☐ **G** less than 50 years of age or achieved significance within the past 50 years

### Narrative Statement of Significance

Refer to Continuation Sheets

## 9. Major Bibliographical References

### Bibliography

#### Previous documentation on file (NPS):

- ☐ preliminary determination of individual listing (36 CFR 67) has been requested.
- ☐ previously listed in the National Register
- ☐ previously determined eligible by the National Register
- ☐ designated a National Historic Landmark
- ☐ recorded by Historic American Buildings Survey # \_\_\_\_\_
- ☐ recorded by Historic American Engineering Record # \_\_\_\_\_

**7. Description**

The Town of Bath Historic District consists of a mixed-use c. 155-acre area of 347 resources located in the Town of Bath, which is commonly known by its post office name of Berkeley Springs. Berkeley Springs is the county seat of Morgan County, the westernmost of the three counties in West Virginia's Eastern Panhandle. The town is located at an elevation of 1,710 feet above sea level in a valley at the eastern foot of Warm Springs Ridge, less than one mile east of the Potomac River which divides West Virginia from Maryland. The nominated historic district consists of the community's central business district, along with the previously-listed Berkeley Springs State Park (NR 1976; Resource Nos. 109-116), a small industrial area east of the downtown, and residential areas surrounding the downtown which also contain several churches and two cemeteries. Warm Springs Run joins with run-off from the community's renowned mineral springs in the heart of the district and courses through the community, flowing north to empty into the Potomac; several small bridges, both contributing and non-contributing, span the waterway within the boundaries of the district.

Among the district's 333 unlisted resources are sites (two cemeteries and the boulevarded portion of Fairfax Street)<sup>1</sup> along with 305 buildings, 20 structures (including a series of retaining walls found throughout the district and the district's roadways, which are each treated as single contributing structures, and surface parking lots, counted individually as non-contributing structures), and 2 objects, including a 1925 veterans' memorial. Also located within the district are 14 previously-listed properties, 7 of which are within the Berkeley Springs State Park (NR 1976). The remaining previously-listed properties are the Berkeley Springs Train Depot (NR 2001; Resource No. 43), the T. H. B. Dawson House (NR 1983; Resource No. 197), the Clarence Hovermale House (NR 2003; Resource No. 20), the Sloat-Horn-Russell House (NR 1984; Resource No. 287), and the Judge John W. Wright Cottage (NR 1986; Resource No. 165). The previously-listed Morgan County Court House (NR 2005), was damaged by fire in 2006 and was subsequently demolished. A series of six temporary modular office buildings (Resource Nos. 169-174) are on the site of the court house; because they were on site at the time of preparation of this document, they are included in the resource count, but they are strictly temporary and will be replaced when a new court house is built.

The Town of Bath Historic District is arranged in a grid, with North and South Washington Street (U. S. Route 522) bisecting the district. Fairfax Street intersects Washington Street in the heart of the downtown; most

---

<sup>1</sup>The springs are part of the previously-listed Berkeley Springs State Park and thus are not counted within the resource count for the Town of Bath Historic District.

Section Number 7 Page 2

---

streets north and south of Fairfax Street bear the “north” and “south” designation. Moving from west to east, the district encompasses portions of the following streets: Wilkes, Washington, Mercer, Green, and Hageman Streets, Pendle Lane, and Pratt Street. Moving from north to south, the district includes portions of Depot, Kent, Union, Independence, Congress, Fairfax, Bath, Liberty, Market, and Warren Streets (the latter of which becomes College Street east of S. Green Street), Dawson Street, and Martinsburg Road (State Route 9). Portions of Bath and Liberty Streets, between Fairfax and Market Street, as well as Pratt Street south of East Market Street, are unopened because of the steep terrain.

All of the streets within the district are paved, generally in asphalt; portions of Fairfax Street east and west of Washington Street retain their 1915 original brick finishes. Rights-of-way vary, with Fairfax Street between Wilkes and Green Street in the downtown being the widest, at 99 feet, followed by Washington Street, at 71.5 feet. The balance of the rights-of-way range between 33 feet and 66 feet.

Pedestrian amenities include concrete sidewalks, in varying condition, throughout the district. Those in the downtown are wider than those in the residential areas. Because of the terrain, sidewalks in some parts of the residential neighborhoods are only on one side of the street. Surface parking lots are found throughout the flatter portions of the district. These are both paved and unpaved and the larger examples are counted as non-contributing structures.

Three traffic signals are in the district, one at the intersection of Martinsburg Road and S. Washington Street, one at North Washington Street and Cacapon Road, and the third at the corner of Fairfax and Washington Streets. Street lighting employs cobra head lighting devices mounted on utility poles and powered by overhead cable.

The buildings in the Town of Bath Historic District are generally two stories in height and are built of brick, wood, and concrete block, only occasionally, of stone. Most buildings rest on foundations of native limestone and brick; some properties dating from later in the Period of Significance employ concrete block or poured concrete foundations. The gabled roof is the preferred roof form, with which are interspersed some buildings with hipped or pyramidal roofs. The previously-listed Sloat-Horn-Russell House (Resource No. 287) at 415 Fairfax Street exhibits the Mansard roof characteristic of the French Second Empire style. The former Gault House Hotel/Pendleton Boarding House on Wilkes Street and the houses at 319 S. Washington and 59 and 88 Hageman Street (Resource Nos. 81, 204, and 208 respectively) have a gambrel roof; that of the hotel was installed in

Section Number 7 Page 3

---

connection with an early twentieth-century remodeling, while the others were originally built as a Dutch Colonial Revival-style residences. Downtown commercial buildings characteristically have front-to-rear sloping shed roofs; the 1885 building at 50 N. Washington Street (Resource No. 66) is an architectural anomaly with a distinctive semi-circular roof. Roof finishes include slate, asphalt, and standing-seam metal; the roof finishes of commercial buildings with flat or shed roofs could not be observed. Historic chimneys of brick penetrate the rooflines of some buildings. In other cases it is likely that chimneys were removed in the process of re-roofing or retrofitting of heating systems.

Patterns of fenestration vary widely throughout the district. With respect to domestic architecture, most windows are flat-topped, crowned with modest molded heads and including one-over-one, two-over-two, and multi-light sash. Some windows on Italianate-style houses are segmental-arched. Commercial architecture typically retains traditional window-to-wall ratios on the first story, with large plate glass display windows flanking recessed entryways. Upper facades of commercial buildings characteristically are penetrated by flat-topped and round-arched windows. The Italianate-style Harmison Building at 45 Fairfax Street (Resource No. 266) incorporates both round- and segmental-arched upper-story windows and the 1915 building at 23 Fairfax Street (Resource No. 263) has broad segmental-arched openings with paired flat-topped sash in each. The religious architecture of the Town of Bath Historic District employs both lancet- and round-arched fenestration, typically glazed with religious art glass.

The Town of Bath Historic District contains a diversity of buildings executed in many of the architectural styles popular throughout the 1776-1959 Period of Significance. Some of the earliest extant buildings in the district, those within the previously-listed state park, represent the Federal style, America's first post-Revolutionary national style. Among these are the Roman Bath House of c. 1815 and the Gentlemen's Spring House (Resource Nos. 114 and 115, respectively).

As the community developed as a popular resort town, buildings were erected following the preferences of mid-nineteenth-century Victorians. The Gothic Revival style is seen in the 1867 "Woodbine," (Resource No. 158) which was originally finished in board-and-batten. Several churches in the district also follow this style: Francis Asbury Methodist Episcopal Church (1890; Resource No. 16, and renamed United Methodist in 1968), the Berkeley Springs Presbyterian Church (1873-1876; 1882; Resource No. 162), and the First United Methodist Church (1889; 1906; Resource No. 193) all incorporate the lancet-arched fenestration which defines the Gothic Revival style.

Section Number 7 Page 4

---

The Italianate style appears in the board-and-batten “Wisteria Cottage” (Resource No. 165) and as well as in the substantial brick “cottage” of T. H. B. Dawson (Resource No. 199), both previously-listed, in 202 N. Washington Street (Resource No. 56), and in the Morgan County Library building on North Washington Street (Resource No. 65), originally built as an Italianate-style residence. Italianate commercial buildings incorporate tall, narrow patterns of fenestration and often feature cornices of wood or metal; within this district the Italianate style is represented in the buildings at 28, 123, 121, and 119 N. Washington Street, 45 Fairfax Street, in the Park Maintenance Shop at 2 Fairfax Street, and in the previously-listed Judge John Wright Cottage at 305 S. Green Street (Resource Nos. 67, 125, 124, 123, 266, and 165, respectively).

The French Second Empire style is characterized by the Mansard roof, typically penetrated by dormers. In this district, a Second Empire-style commercial building at the corner of Fairfax and N. Washington Street has been completely remodeled, leaving only the 1879 Sloat–Horn–Rossell House at 415 Fairfax Street (Resource No. 287; NR 1984) to represent this style.

The Eastlake style bears the name of English designer Charles Locke Eastlake and manifests itself in the elaborate sawn and turned trim which often appears on buildings from the last quarter of the nineteenth century. In the Town of Bath Historic District, the Eastlake style is seen in lacy porches at 307 Fairfax Street (Resource No. 283) and at the previously-listed T. H. B. Dawson House (Resource No. 199) at 300 S. Green Street.

Late in the nineteenth century, the Queen Anne style came into vogue, employing a liveliness of profile and often a variegation of surface finishes. Within this district, the Queen Anne style appears in the St. Mark’s Episcopal rectory at 401 S. Washington Street and in “Highspire” at 209 Wilkes Street (Resource Nos. 104 and 25, respectively).

Another late-nineteenth/early twentieth-century style was the Neo-Classical Revival style, which looked back to ancient Greece and Rome for its inspiration and was typically reserved for substantial domestic and institutional architecture such as banks and major public buildings. In Berkeley Springs, this style is seen in the house at 51 Independence Street, 307 S. Washington Street, and in the *News* office building at 41 Congress Street (Resource Nos. 230, 77, and 244, respectively).

The Stick Style, another late Victorian manifestation, employed patterns of horizontal, diagonal, or vertical elements as part of the exterior finish which suggested the framing members within the walls. St. Mark’s

**Morgan County, WV**

Section Number 7 Page 5

---

Episcopal Church (Resource No. 103) on S. Washington Street is built in the Stick Style and, indeed, is among the finest examples of this distinctive style in the Eastern Panhandle.

The architecture of the district is also representative of styles popular into the early twentieth century and through the post-World War Two era and the end of the district's Period of Significance. With the fervor of patriotism of the American Centennial of 1876 came a resurgence of interest in pre-Revolutionary American design. The Colonial Revival style drew upon these eighteenth-century antecedents, sometimes with a painstaking attention to detail and sometimes with only the occasional Colonial-era trim element affixed to an otherwise unremarkable building. In the Town of Bath Historic District, Colonial Revival-style design appears late in the nineteenth century and into the early decades of the twentieth and is seen in the buildings at 31 Congress Street, 48 and 38 S. Mercer Street, 180 Fairfax Street, 32 Williams Street, 129 and 117 Warren Street, and in the 1930s Park View Inn at 207 South Washington Street (Resource Nos. 243, 167, 168, 289, 220, 305, 304, and 108, respectively).

A sub-set of the Colonial Revival style is the Dutch Colonial Revival style, a strictly twentieth-century mode in this district and one which employs the double-pitched gambrel roof seen in houses of Dutch derivation along the eastern seaboard. In the Town of Bath Historic District this style appears in the gambrel-roofed remodeling of the former Gault House hotel (later known as the Pendleton Boarding House) on Wilkes Street (Resource No. 19) and in the 1920s houses at 319 S. Washington Street, 59 and 88 Hageman Street (Resource Nos. 81, 204, and 208, respectively).

The Cape Cod style draws its inspiration from Colonial cottages from New England, with a 1½-story side-gable-roofed plan and roof slopes penetrated by dormers. Cape Cod-style houses, popular from the 1930s through the end of the Period of Significance, include 249 Wilkes Street, 259 Fairfax Street, and 172, 154, 146, and 76 Martinsburg Road (Resource Nos. 38, 213, 319, 321, 322, and 324, respectively).

Another of the revival styles which developed late in the nineteenth century and continued well into the twentieth was the Tudor Revival, which employed the half-timbered finish which characterized Elizabethan design from the sixteenth and seventeenth centuries. The house built for Ralph Hovermale in 1939 at 171 S. Washington Street (Resource No. 73), converted for use as professional offices, represents this style.

Section Number 7 Page 6

---

The Craftsman style, most often occurring as a Bungalow, appears in several areas of the district and, indeed, is among the most oft-repeated house style in the district. One-and-one-half stories in height, Bungalows in the district have side-gable roofs which extend beyond the plane of the building on the facade to shield a recessed front porch. They are found finished in brick, stone, and wood and have a dormer, sometimes front and rear, to allow light and usable space into otherwise small and dark upper stories. Examples in this historic district include 227, 311, and 319 Wilkes Street, 283, 79, 351, and 363 S. Washington Street, 87 and 161 S. Mercer Street, 66 Hageman Street, 10 Warren Street, and 124, 74, and 64 Martinsburg Road (Resource Nos. 26, 33, 34, 76, 79, 85, 86, 160, 199, 209, 301, 323, 325, and 326, respectively).

The advent of the automobile brought about an entirely new type of building type, known generically as roadside architecture. The most oft-seen manifestation of roadside architecture is the service station, examples of which ranged from the simple to the complex and fanciful. A former gasoline station at 99 Martinsburg Road (Resource No. 317), likely dating from the 1930s and converted for office use, represents historic roadside architecture in the Town of Bath Historic District.

Dotting the Town of Bath Historic District are a series of garages, some located at the end of driveways and other built into the steep side hill slopes of Warm Spring Ridge and Hospital Hill. These small, yet distinctive, buildings are built of wood frame, brick, and concrete block, and in some cases retain their original hinged garage doors.

While the above properties reflect specific architectural styles, many of the properties in the Town of Bath Historic District are vernacular in character, employing interpreting that oft-misinterpreted description as it is defined in Ward Bucher's **Dictionary of Building Preservation**: "a building built without being designed by an architect or someone with similar formal training; often based on traditional or regional forms."<sup>2</sup> The term, "vernacular," as it is used here, is by no means a pejorative, particularly since so many buildings built nearly everywhere during the Period of Significance of the Town of Bath Historic District reflect local building traditions and the skill of local builders rather than those of formally-trained architects.

A particular manifestation of vernacular architecture is *industrial* vernacular, referring to the myriad historic industrial buildings erected as the nation matured in the wake of the Industrial Revolution and after. In

the Town of Bath Historic District, a compact industrial area lies east of Washington Street and the substantial 1911 Morgan County Cold Storage building (Resource No. 177) at 138 Independence Street along with the buildings at 155 North Mercer and 282 Williams Street (Resource Nos. 150 and 153, respectively) reflect this distinctive building type.

Summarizing, the Town of Bath Historic District consists of a mixed-use Eastern Panhandle, West Virginia district whose Period of Significance begins with the organization of the town in the 1770s and ends 1959, the approximate date of construction of the latest of the district's historic architecture. The district includes the downtown area of the Morgan County seat, along with surrounding residential areas, a small industrial pocket adjacent to the downtown, and a previously-listed state park containing the community's celebrated springs. As noted in the introductory paragraph, the Town of Bath Historic District retains historic and architectural integrity and its overall historic character is intact, representing development in this section of the Panhandle throughout the district's Period of Significance. Alterations to buildings within the historic district include the application of non-historic siding and the installation of replacement windows, but with respect to the district as a whole, these alterations do not detract significantly from the ability of the nominated area to reflect its appearance at the end of the Period of Significance. Non-contributing buildings include a small number of properties which have been heavily remodeled with a forfeiture of integrity along with buildings post-dating the Period of Significance. Many of these newer buildings are garages located at the rear of their respective houses. The highest concentration of non-historic resources is located on North Mercer Street where six temporary office trailers are serving the county's needs until a new county court house can be constructed.

The following resources, with numbers keyed to the map accompanying the nomination, are found within the Town of Bath Historic District:

1. 492 Wilkes Street, residential

Description: 2-story central-passage I-house with a side-gable roof, 3-bay facade and 1-story hip-roofed front porch; rearward-projecting ell at rear

Date: c. 1890

1 contributing building

2. 386 Wilkes Street: 2-story vernacular gable-front house with gable roof of standing-seam metal; 3-bay facade with centered entry; hip-roofed front porch supported by battered wood posts resting on brick piers; 1-story addition on north elevation

c. 1890

13. 240 Wilkes Street, residential

Description: 1-story non-historic commercial building of concrete block construction, appearing to be built outside the Period of Significance of the district

Date: c. 1970

1 non-contributing building

14. 234 Wilkes Street, residential

Description: 2-story vernacular house which appears to have begun as two separate dwellings, linked early on with a central connector; gable-end orientation with flat-topped fenestration

Date: c. 1900

1 non-contributing building

15. 212-176 Wilkes Street, residential

Description: interconnected 2-story American Foursquares of brick with hipped roofs and hip-roofed front porches; flat-topped fenestration; interconnected with its neighbor to the south and incorporating as substantial contemporary addition on the west side

Date: c. 1920 and after

1 non-contributing building

16. Wilkes & Congress Streets, Francis Asbury Methodist Church, religious

Description: Gothic Revival-style red brick church, with an L-shaped facade and a square bell tower in the angle of the facade, with the principal entrance to the church through this bell tower. Fenestration is lancet-arched with stone sills and corbeled brick lintels. Religious art glass is in each of the windows. A 1950s concrete block addition is appended on the rear (east) elevation

Date: 1890; 1953

1 contributing building

17. 6 Wilkes Street, residential

Description: 2½-story American Foursquare, the exterior surface of which are finished in rock-faced concrete block. Capped with a hipped roof penetrated by a brick chimney and a shed roofed dormer on the facade. The eaves extend well beyond the plane of the building, and a one-story hip-roofed porch extends across the facade, supported by concrete block piers and ornamental concrete columns. The porch is enclosed with a spindle wood balustrade. Fenestration is flat-topped, 1/1, and a two-story wood frame addition or enclosed porch is on the rear.

Date: c. 1910

21. Rear, 176 Wilkes Street, residential

Description: small-scale vernacular residential building located part way up the slope of Warm Springs Ridge

Date: c. 1900

1 previously-listed building

22. 175 Wilkes Street, residential

Description: Two-story vernacular I-house of with the rear (west) section of brick and the front (east) of wood construction, with laterally-oriented gable roof and five-bay facade, with an original centered entry, and a second entry which appears to have replaced an original window on the south side of the facade. Extending across the facade is a porch shielding the interior three bays, with replacement wrought iron supports and balustrade along with a second floor balustrade along the roof line of the porch. A centered entrance opens from the second story onto the porch roof. Fenestration is flat-topped, 2/2, without notable ornament. Porch supports and balustrade replaced with wrought iron elements and interior converted for professional office use

Date: c. 1850

1 contributing building

23. 181 Wilkes Street, residential

Description: 2-story residential building with side-gable roof; major alteration including installation of non-historic oriel on facade, with forfeiture of integrity

Date: c. 1900

1 non-contributing building

24. 185 Wilkes Street, residential

Description: Two-story vernacular I-house of wood construction, L-shaped in form with a laterally-oriented gable roof and partial returns of the cornice on the gable ends. Three-bay facade with a centered entrance, suggestive of a central-passage interior plan. Extending across the facade is a hip-roofed porch, with turned posts and replacement spindle wood balustrade. Fenestration is flat-topped, with fixed non-historic shutters. A 1-story rectangular bay window has been appended onto the side, appearing to date from within the period of significance

Date: c. 1890

1 contributing building

25. 209 Wilkes Street "Highspire," residential

Description: Among the community's finest Queen Anne-style residences, this imposing house has an L-shaped facade with a wrap-

102. 200 South Washington Street, commercial

Description: 1½-story Neo-Colonial Revival-style brick commercial building with side gable roof penetrated by dormers, appearing to be built outside the Period of Significance of the district

Date: c. 1980

1 non-contributing building

103. 180 Washington Street (St. Mark's Church), religious

Description: Locally distinctive Stick-style religious building of wood construction, finished in weatherboard and shingles, with a variety of rectilinear trim on all sides. The main portion of the church is gable-roofed, with a gable-end orientation to the street. Entry bays are recessed on the north and south side of the facade. Fenestration is flat-topped, with some windows having segmental-arched transoms, windows are glazed with religious art glass. An undersized bell tower finished in imbricated shingles is capped with an open belfry and a pyramidal roof.

Date: 1882

1 contributing building

104. 180 South Washington Street (St. Mark's Rectory), religious residential

Description: Queen Anne-style residence of wood construction with a multiple roof system, including a pyramidal roof penetrated by a shed dormer, and a forward-projecting gable roof wing on the south side of the facade. Extending across much of the facade is an open veranda with pediments and replacement supports. A locally-distinctive corner bay on the northeast corner has a conical roof capped with a pinnacle. Non-historic siding added and porch supports replaced at indeterminate time.

Date: 1888

Description: c. 1950

1 contributing building

108. 207 South Washington Street (Park View/Country Inn), commercial

Description: The Park View Inn was erected in 1933 by Walter and Jennie Harmison on the site of the Berkeley Springs Hotel which burned in 1898; side wings were added in 1937. Harmison came from a family of Berkeley Springs hoteliers. This is a complex of several interconnected buildings, the earliest which dates from 1933, built as a resort facility adjacent to the Berkeley Springs State Park, and the mineral springs for which the community is so well known. Colonial Revival in style, the main building incorporates a three-story block with a laterally oriented gable roof and a symmetrical facade with a centered entrance, shielded by a two-story portico. Side wings are two stories in height, with three bays each. Several additions have been made to the main building, and a considerably newer three-story brick section stands west of the main building.

109. Administration/Baths, recreational

Description: One-story Colonial Revival-style public bath, with a hipped roof and a centered pediment on the facade. The facade is symmetrically-massed, with a centered entry, shielded by a pedimented hood. Fenestration is flat-topped with multi-light sash capped with keystones. Sparse in its detailing. The interior has been updated over the years but the exterior appears little altered from its 1920s construction.

Date: 1929

1 previously-listed building

110. Park Office, recreational

Description: Small scale one-story painted brick-finished building with a hipped roof of standing-seam metal. The side elevations are penetrated by a series of flat-topped openings as well as round-arched openings on the shorter ends. Under the eaves is a series of scalloped ornament, appearing to date from the 1820s. The building exhibits little other architectural ornament. The original wood surfaces were clad in brick at an indeterminate time well within the period of significance, likely in the 1820s or 1830s, judging from the character of the trim and finishes.

Date: c. 1787

197. 300 South Green Street (T. H. B. Dawson House), residential

Description: Substantial L-shaped brick house with laterally-oriented gable roof and symmetrically-massed facade with a centered entry flanked by sidelights and capped with a transom. The facade incorporates bay windows on the outermost bays on the first story and a conventional 5-bay arrangement on the second story. The first story of the facade also is shielded by a porch, with the bay windows creating a U-shaped form and a broad straight-run wood stair with sawn balustrades accesses the main entry. Prominent center gable on facade with Eastlake-style bargeboard. Fenestration segmental-arched, 2/2, with exterior operable louvered shutters corresponding to the form of the window. On the north elevation is an elaborate 1-story wood porch with Eastlake-style sawn trim and a balustrade matching that of the entry stair on the facade.

been inserted into the first story of the east gable end. Several additions of indeterminate age are built along the rear. Converted for use as professional office.

Date: c. 1840

1 contributing building

259. 11-13 Fairfax Street, commercial

Description: Distinctive corner building with irregular facade addressing its corner location, with a deeply recessed center entry and storefronts on either side retaining original large-scale display windows. Original storefront cornice is intact and the upper facade is penetrated by a series of flat-topped windows, 1/1. Extending across the facade is a cornice of pressed metal, lacking any notable ornament. Converted for use as antique mall

Date: 1922

1 contributing building

260. Fairfax Street bridge, road-related

Description: bridge spanning Warm Springs Run, with the waterway culvertized under buildings on the north side of the street and a concrete balustrade with 21 balusters retained on the south side, at the northern edge of Berkeley Springs State Park

Date: c. 1930

1 contributing structure

261. 15 Fairfax Street, commercial

Description: small contemporary food-service commercial building finished in shingles, dating from outside the Period of Significance of the district

Date: c. 1960

1 non-contributing building

262. 21 Fairfax Street, commercial

Description: Three-story commercial building of brick construction, with a altered storefront and upper facade incorporating paired oriel windows, two stories in height, finished in decorative wood shingles; it appears that an original cornice was likely removed from the roof line. The storefront has been altered and the massing of the upper facade suggests that some alterations have occurred; the oriel windows may be a modification, seemingly within the period of significance. Built on the site of the Fairfax Hotel which burned in 1901.

Date: c. 1910

1 contributing building

263. 23 Fairfax Street, commercial

Description: Two-story commercial building of brick construction, vernacular in character, with generally traditional storefronts including display windows, bulkheads, and recessed entryways. Original storefront cornice is intact. The upper facade is two bays in width, with segmental-arched openings containing paired flat-topped windows in each. Extending across the upper reaches of the facade are three openings in-filled with ventilation grilles. Storefront altered, but retaining traditional window-to-wall ratio.

Date: 1915

1 contributing building

264. 31-33 Fairfax Street, commercial

Description: Three-story commercial building of brick construction, with a altered storefront and upper facade incorporating paired oriel windows, two stories in height, finished in decorative wood shingles. It appears that an original cornice was likely removed from the roof line. The storefront has been altered and the massing of the upper facade suggests that some alterations have occurred; the oriel windows may be a modification, obviously within the period of significance. Interconnected with 35 Fairfax Street

265. 35 Fairfax Street, commercial

Description: Three-story commercial building with the storefronts altered, and the upper facade incorporating a five-bay arrangement on each story, with flat-topped windows set on extended rock-faced sills and capped with stone lintels. Historic post card view indicates there to have been a cornice extending across the roof line, but this element has been removed. Interconnected with 31-33 Fairfax Street  
Date: 1913

1 contributing building

266. 45 Fairfax Street, commercial

Description: Two-story Italianate-style commercial building of brick construction, with the storefront altered but the upper facade appearing intact and original, with a four-bay arrangement on the second story and a highly stylized cornice extending across the facade, with both large and small brackets. The second story incorporated segmental-arched and round-arched windows, with Classically-derived ornament, and two datestones inset into the surfaces above the second story windows bear the name Harmison in each and the date of 1876 in one and 1890 in the other. Storefront in-filled and pent roof added at indeterminate time.

Date: 1876; 1890

271. 127-129-131 Fairfax Street (Masonic Lodge Building), commercial

Description: Two-story Neo-Classical Revival-style commercial building finished in yellow brick, originally with a flat roof, but presently exhibiting a slightly canted shed roof. Two storefronts are located on the Fairfax St. elevation and an office is on the Mercer St. side. Storefronts have been somewhat altered, but retain traditional window-to-wall ratio. Fenestration is flat-topped, and windows appear to have been shortened. A modest cornice extends across the facade and side elevations, above which is a parapet wall. A marker at the entrance door to the second-story Masonic Lodge indicates that the organization was chartered November 13, 1890. This building

Description: French Second Empire-style cottage physically oriented toward the downtown. First story finished in board-and-batten siding, with a reverse bellcast Mansard second story. A portion of the roof has a truncated hipped form, with a balustrade at the flat peak. L-shaped overall footprint with a 1-story veranda extending across a portion of the facade, set on a raised foundation. with a sawn balustrade and lacy sawn brackets/ Fenestration is flat-topped, with decorative heads. Mansard penetrated by segmental-arched dormers. Interior red brick chimneys. Built as the home of Bath mayor Alexander T. Sloat, this is the only French Second Empire-style house in the community. The house was also the home of Frank Horn, who was associated with the DeFord Tannery.

Date: 1879

1 previously-listed building

288. 192 Fairfax Street, residential

Description: 2-story residence with first story of brick and second of wood frame, with the second story cantilevered over the first on the facade and a portion of the north elevation, shielding a recessed porch; porch is supported by wood posts resting on brick piers and is enclosed within a wrought iron balustrade

Date: c. 1900

1 contributing building

289. 180 Fairfax Street, residential

Description: L-shaped concrete block residence, incorporating elements which would have thought of as "Colonial" at the time of construction. Intersecting gable roof with partial returns of the cornice on the gable ends and imbricated shingle finishes in the pediments. Pediments are further articulated by windows, that on the facade having a 2/2 sash flanked by multi-light units. Wrap-around veranda on facade and portion of west elevation, supported by plain wood posts set on piers of concrete block and retaining original porch skirting. Fenestration flat-topped throughout.

332. 171 Market Street (Highlawn Inn), residential

Description: Substantial eclectic former residence now converted for use as bed-and-breakfast inn. L-shaped footprint, with intersecting gable roof and broad veranda on the facade, supported by Doric posts and enclosed within a spindle balustrade. Variety of surface finishes including weatherboard and shingles. Reed brick chimneys penetrate roofline. Fenestration flat-topped. Interior spaces restored for use as bed-and-breakfast inn.

Date: 1902

1 contributing building

333. 334 Market Street, residential

Description: Among the district's least altered properties, this is a 3-bay I-house of wood construction with a laterally-oriented gable roof and interior gable-end chimneys of brick. A centered pediment is on the facade, penetrated by a fixed round-arched window with a pointed surround. Three-bay facade with a centered entry suggestive of a central-passage plan. Fenestration is flat-topped, with exterior operable wood shutters, all of which are closed, preventing a description of the sash configuration. Extending across the facade is a hip-roofed porch with replacement balustrade and lacy sawn ornament.

Date: c. 1870

1 contributing building

334. 222 Fairfax Street, residential

Description: The siting of this house, facing west, indicates that it was built before the property immediately to the west.. 5-bay central-passage I-house clad in asbestos shingles, with and L-shaped footprint and a laterally-oriented gable roof on the facade, with partial returns on the cornice on the gable ends. Front porch shields innermost bays on the facade and is supported by wood posts and trimmed with sawn ornament. Flat-topped fenestration, 2/2. Enclosed back porch.

**8. Significance**

The Town of Bath Historic District conforms to National Register Criteria A and C. Under Criterion A, the district is significant for its association with the patterns of *commerce, community planning and development, and health and medicine*. With respect to commerce, Berkeley Springs is by far the largest community in rural Morgan County and has served as the commercial hub of the county throughout its existence. The district's Criterion A significance for health and medicine derives from its position as a well-known mineral spring community since the days of George Washington. Its Criterion A significance for community development and planning derives from its position as a late-eighteenth-century planned community, laid out in regular building lots, with specific sections set aside for the benefit of the public and restricted from private-sector development. The district's Criterion C significance is supported by the strong concentration of architecture in the community, representing many of the formal design modes popular throughout the long Period of Significance, which begins in 1776, the date which marks the organization of the town under an act passed by the Virginia Legislature. Construction continued throughout the community's long history and the Period of Significance extends until 1959, which conforms to the National Register 50-year guideline but more importantly, since the community's position as a health-related resort remained strong and since Bath remained the commercial hub of Morgan County at that time.

Morgan County was erected in 1820 from portions Berkeley and Hampshire counties and was named for Revolutionary War hero Daniel Morgan.<sup>3</sup> The westernmost of the Eastern Panhandle counties, Morgan has a far more rugged landscape than either Jefferson or Berkeley County, the two Eastern Panhandle counties to the east. The first census to record Morgan County was in 1820, which recorded a population of only 2,500 in the entire county. The population grew slowly throughout the balance of the nineteenth century, dropping from 4,258 to 3,557 between 1840 and 1850, and reaching 7,200 by 1900. Until 1980, the Morgan County census count never exceeded 10,000. The county's 2000 population of 14,943 is the highest yet attained, yet it pales by comparison to Jefferson and Berkeley Counties, whose 2000 populations were recorded at 50,243 and 97,534, respectively.

Long before Morgan County was established, the town that would become its seat had gained considerable fame. Many came to "take the waters" for a cure, others came more to see and be seen, and most simply for diversion. Berkeley Springs became one of America's oldest resorts. The earliest settlement was

known by a variety of names, including Bath, Bath Town, Berkeley Springs, Warm Springs, and Frederick Springs. The village that grew up here in the mid-eighteenth century was most widely known as Warm Springs, but the Virginia General Assembly officially established it as the town of Bath in 1776, naming it for the famous English spa of the same name.<sup>4</sup> Bath remains its official name, although is it best known by its postal name, Berkeley Springs.

Native Americans valued the springs that issued from the base of Warm Springs Ridge at the western edge of the historic district, and European colonials followed suit. The springs lay within the extensive Northern Neck Proprietary of Thomas, Sixth Lord Fairfax of Cameron (1693-1781). George Washington's elder half-brother, Lawrence (1718-1752) was married to Anne (1728-1761), a daughter of Colonel William Fairfax of Belvoir, a land agent and cousin of Lord Fairfax. In March 1748, while on a surveying trip in the employ of Lord Fairfax, George Washington, not yet a month past his sixteenth birthday, recorded in his diary that he had "called to see y. Fam'd Warm Springs," suggesting that the fame of the place was well established even by that time. Washington's first visit was only a day's duration, but he returned a number of times for longer visits over the ensuing decades. In 1769, Martha Washington's daughter, Martha "Patsy" Custis was brought to the springs in hopes of curing what may have been epilepsy. "It was hoped that a sojourn at the medicinal springs would prove of benefit to her. The three, Washington, his wife, and Patsy Custis, traveled in the family chariot."<sup>5</sup> Evidently, the community's medicinal value was of little long-term help, since Patsy Custis died in 1773 at about the age of 17.<sup>6</sup>

Along with George Washington, Samuel and John Augustine Washington also owned property in Bath. Samuel Washington's Will was probated in 1781 and left his brother, John, "two lots in Bath town purchased of the commissioners, together with their appurtenances."<sup>7</sup> John Augustine Washington's Will, written in 1784 and probated in 1787, included two Berkeley Springs lots as part of his estate as well.<sup>8</sup>

---

<sup>4</sup>The road from Alexandria, outside present-day Washington, D. C., to Berkeley Springs was known as Alexandria-Warm Springs Road. It meanders through portions of Jefferson and Berkeley Counties prior to reaching Morgan County; it retains the name, "Warm Springs Road," in several areas.

Tradition holds that Lord Fairfax granted the springs to the colony with the stipulation that they be kept free and open "to the publick for the welfare of suffering humanity." Their reservation for public use was part of the 1776 Act of the Virginia Legislature which created the community and strengthens the Criterion A significance of the district for community planning as an early planned community.

The early days of the settlement saw only rudimentary log buildings the crudest of shelter dotting the cultural landscape Bath. John J. Moorman, in his *Guide to the Virginia Springs*, described accommodations which were available visitors:

A large hollow scooped in the sand, surrounded by a screen of pine brush, was the only bathing-house; and this was used alternately by ladies and gentlemen . . . The whole scene is said to have resembled a camp-meeting in appearance, but only in appearance. Washington, who was there, accompanied by Martha and her children, in August 1761, informed a friend that there were "of both sexes about 200 people at this place, full of . . . diseases and complaints."<sup>9</sup>

By 1776, the first year of existence of the Commonwealth of Virginia, settlement had grown around the mineral springs to the extent that more than two hundred petitioners requested the legislature to establish a town. The act called for a 50-acre town site to be "laid out into lots of one quarter of an acre each, with convenient streets." In specifying quarter-acre lots, instead of the half acre typically specified in such legislation, lawmakers acknowledged that Bath would develop as a community of "second homes," not year-round houses requiring space for subsidiary buildings. Purchasers had to build within a year "a dwelling house twelve feet square at least," that dimensions being among the smallest required by any Virginia town act. This early covenant also contributes to the Criterion A significance of the district as a planned community.

Several other clauses in the Act were also unusual, if not unique. Funds that would accrue from repossession and resale of unimproved lots would be applied "towards accommodating such infirm persons as may resort to the said springs, and should be so poor as to be unable to accommodate themselves." The legislation exempted from sale any lots "whereon any house or houses already built by. . . Thomas Lord Fairfax may happen to be," but anyone else who had built before the town was platted had "to remove or otherwise dispose of the said houses" within six months. As for the springs, except for "one large and convenient spring suitable for a bath" (Lord Fairfax's private bath), the Act vested a four-acre square surrounding them in the hands of trustees, "in trust, to and for the public use and benefit, and for no other purpose whatsoever."

In an auction of all town lots in August, 1777, George Washington acquired two lots at the southeast corner of Fairfax and Mercer streets, two blocks from the springs. Because of his military and political commitments, Washington had little time to devote to building in Bath in the late 1770s and early 1780s, but other property owners did. At last, in September 1784, Washington was ready and able to build. On a visit to Bath that month, he obtained a town plat, "ascertained the situation of [his] lots therein," and sketched plans for a "dwelling house, Kitchen and Stable." He also contracted with James Rumsey, a jack-of-all-trades, to build them.<sup>10</sup> Washington obviously intended something far more elegant than the required twelve-foot-square dwelling. His lengthy and detailed specifications, which he transcribed in his diary on September 6, 1784, called for a house "36 feet by 24, with a gallery of 7 feet on each side." Contemporary documentation of Rumsey's role is lacking, but some reports maintain that he promised to have the work "finished by the 10th of next July."

Unfortunately, a fire—one of many that would plague the town--destroyed Rumsey's sawmill, burning the timbers he had prepared and making it impossible to meet Washington's July 10, 1785 deadline. He eventually completed his part of the bargain, but apparently his work was less than satisfactory. Washington had little or no time to enjoy his vacation home during the remainder of his busy career. In 1796, while visiting Mount Vernon, Benjamin Henry Latrobe recorded in his journal that the president "has himself a house [at Berkeley Springs], which he supposes must be going to ruin." Latrobe also wrote that Washington was no longer inclined to go to Bath, as "the increased dissipation and frequency of visitors would be an objection . . . unless the health of himself or family should render it necessary." In the schedule of property appended to his Will, Washington noted that his two lots were "well situated and had buildings to the amt. of £150" but admitted that he had no idea "whether property there has [increased] or decreased in its value."

In addition to private construction, public improvements in the community were made as well. In 1786 the trustees built separate pools and baths for men and women. They are now part of the National Register-listed Berkeley Springs State Park. Some accounts credit James Rumsey with this construction while others suggest that Rumsey was no longer in the community at this time.<sup>11</sup> Whether any of Rumsey's work remains is uncertain.

---

<sup>10</sup>Rumsey is most often remembered as the 1787 inventor of the first mechanized boat with which he plied the Potomac River at Shepherdstown, now in Jefferson County, West Virginia.

The town retained its original name until 1802 when the Commonwealth of Virginia established a postal system. A community by the same name in Bath County was allowed to retain its name, and the postal name became Berkeley Springs, by which the community remains largely known. The municipality, however, is still the Town of Bath.

The mineral springs retained their allure in post-Revolutionary America, although early in the nineteenth century, a fever struck during the height of the season, and for a time Bath was nearly deserted. Uriah Brown, a lawyer who was in Bath attempting to obtain title to several houses for Baltimore merchant John Trimble, provided a vivid depiction of the resort's decline in his journal. He counted "40 or fifty 1½ & 2 story Log houses that is abandoned Haunted and frequented with Cows, Sheep & Hogs, the Doors & Windows all carried away." Although he noted that one of the buildings had originally been "finished in Stile," it now had "hole in each Side of the Roof big enough to Let Cate [Brown's horse] through."<sup>12</sup>

There was, however, hope for the future. Brown observed that "the people here are in high spirits of Having the County Divided then Berkeley Springs becomes a County-Town." Those wishes came to pass in 1820 with the erection of Morgan County. Some developmental spur came with the community's designation as county seat, but in the 1830s, other Virginia spas far to the southwest began to rival and then surpass Berkeley Springs as the fashionable place to be. In addition, the waters of the more southern spas were warmer and were reputed to be more effective.

Technology, particularly the 1842 arrival of the Baltimore & Ohio railroad at nearby Sir John's Run west of warm Springs Ridge brought new infusions of northerners. Unfortunately, Berkeley Springs could offer only meager competition with Saratoga Springs, the upstate New York mineral springs community, or Cape May, New Jersey, along southern New Jersey's Atlantic coast. Adding to the town's troubles, an 1844 fire destroyed fourteen buildings, including the court house and several boardinghouses.

Undaunted, Colonel John Strother, who had operated one of the burned boardinghouses, "made immediate preparation for the erection of a hotel" and continued the operation of his other boarding houses as well. He completed a wing of the new hotel in time for the 1845 season and by 1848 the entire U-shaped structure adjoining the springs and public square was open for business. Accommodating as many as four

hundred guests, the Berkeley Springs Hotel--or the Pavilion, as Strother called it--was largest building ever erected at the resort.

Writing in 1851, John J. Moorman described the Pavilion:

It is built of wood, on three sides of a quadrangle, 168 feet front by 197. The front building is four stories high, has a portico 130 feet long, 16 wide, a dining and ball-room 106 feet by 30, three large

public parlours, and a bar-room. The wings are respectively two and three stories high. basement of stone, fire proof, roomy, and well ventilated, contains the kitchen department and wine cellar. The court yard, about 100 feet square, is tastefully ornamented with trees, flowers, and shrubbery.<sup>13</sup>

Woodcuts and photographs indicate that it was indeed as impressive as it sounds. The only flaw, according to an 1851 visitor, P. V. Daniel, was that "the single rooms are too small." Daniel also offered an explanation why there were so few customers:

It seems that by a company of speculators in Baltimore & Winchester, great efforts have been made to puff into importance as a place of fashion, the Cacapon or Capon Springs; and the crowd tends very much to that point. This has taken off many of the usual visitors at this place.<sup>14</sup>

The hotel at Capon Springs in neighboring Hampshire County was completed a year after the Pavilion and was almost a carbon copy of it. More than likely a Baltimore architect or architects designed both, although no attributions have been made.

In 1863, Morgan County became one of the counties in the new state of West Virginia. Berkeley Springs did not suffer unduly during the Civil War, as it could claim little in the way of territory, manufacturers, or commerce that either side considered valuable. After the war, a Baltimore company purchased the Pavilion, refurbished it, and equipped it with gas for the town's 1876 centennial celebration. Former Union General David Hunter Strother, son of Colonel John Strother, gave the centennial address. He observed,

. . .since 1865 Berkeley has been gradually but hopefully recovering from the waste and decay of that unhappy period . . . Dilapidated and unsightly buildings have disappeared to be replaced by ornate cottages, exhibiting architectural taste with charming rural surroundings.<sup>15</sup>

Although some facilities at the springs are older, the sort of post-Civil War cottages that Strother applauded, erected when the town was enjoying a mild post-War resurgence as a summer resort, still contribute the present-day architectural character of the Town of Bath Historic District.

In 1888, the Berkeley Springs and Potomac (later part of the Baltimore & Ohio) Railroad came into Bath from Sir John's Run, opening the community to a significantly easier transportation network than had been available before. The new line served not only the tourist trade but also enabled local businesses both to ship their goods out more efficiently and to secure goods from the outside as well. Canneries and other businesses opened locally and took advantage of the new-found ease of transportation. Early in the twentieth century Newbraugh's Feed and Supply used the line for coal and a variety of other goods. Adjacent to the depot, a lumber yard shipped pulpwood to Luke, Maryland for decades and the tracks were eventually extended up Williams Street to serve the Interwoven Mill. Passenger service lasted until 1935; the railroad's 1915 depot, a Mission-style building previously listed in the National Register, is at the northern edge of the Town of Bath Historic District.<sup>16</sup>

Fire continued to ravage the community on several occasions. In May, 1890, the St. Elmo Hotel burned and the *News* reported, "the Berkeley Springs Hotel has not been destroyed by fire as some of our exchanges say, but the St. Elmo Hotel, known locally as the Fruit Hill property, was [destroyed]. The loss is bad enough but not near so bad as the burning of our large hotel would be."<sup>17</sup> Eight years later, during the last week of March, 1898, the Berkeley Springs Hotel burned to the ground. Significantly, a late-nineteenth-century lithograph of Berkeley Springs looking from Warm Springs Ridge, although drawn before the fire, barely showed the hotel. Instead, it focused on commercial and industrial enterprises including a tannery in the heart of the downtown. With the dawn of the twentieth century, agriculture remained an important element in the local economy as did tourism. As the century progressed, a textile mill opened along with sand "mines" north of town to furnish this essential ingredient for glass and to provide employment for those who lived in Bath.

Numerous plans for a hotel to replace the Pavilion were discussed and drawn up over the years, as notices in *Manufacturers Record* and other journals attest. Although several Baltimore architects prepared plans, none got beyond the drawing boards. In 1925 the Washington, D. C. firm of Milburn, Heister and Company proposed

a mammoth \$1 million hotel with Spanish overtones that would have been more at home in Palm Springs than Berkeley Springs. Their hotel would have accommodated 500 guests. Ground was broken in 1926, but the project was never completed. In 1933 a far more modest hotel, the Park View, now the Country Inn (Resource No. 108), was built on part of the site.

The largest community in the sparsely-populated county, Berkeley Springs was the commercial center of the area. Its compact downtown still retains historic commercial buildings along Fairfax and North Washington Streets. In its earliest days, small pockets of industrial activity were found throughout the community. These are typified by the DeFord & Company Tannery on Wilkes Street depicted on the 1885 *Sanborn Fire Insurance Map* immediately north of Fairfax Street, on the present site of a 1920s concrete block American Foursquare (Resource No. 17). DeFord also had operations on Congress and Mercer Streets. Most industry lay in the Mercer Street area, west of the downtown, including wagon shops, tin- and blacksmiths, a planing mill, and a canning factory. The Yancy Bark Mill was located on Williams Street, and several nineteenth-century buildings built along Mercer Street were used for bark storage.<sup>18</sup>

Among the largest industrial endeavors was the Interwoven Hosiery Mill, a substantial brick manufacturing plant (Resource No. 150) which extends between Williams and Union Street and originally produced stockings. A second, nearly matching, building lies one block further to the south, and these two properties serve as major anchors to the historic industrial sector of the historic district. They are joined by the Morgan County Cold Storage Company, a buff-colored brick building built in 1911 as storage for apples and for the manufacture of cider; it has been converted for a community arts facility.

Returning to the general history of the town, the springs and the adjoining property, including the associated buildings, had remained in the hands of the town's trustees since the original platting of the community in 1776. In 1925, the trustees transferred both the springs and the public square to the West Virginia Commissioner of Public Institutions. In 1970, title became vested in the state's Department of Natural Resources, and the tract is now the Berkeley Springs State Park (NR 1976; Resource Nos. 109-116).

Education in Bath was vested in early private schools and eventually in a public education system. Mt. Wesley Academy was established in 1878. The Old Dominion Academy located here in 1914 and operated until

the end of the 1924 school year. It was listed in a 1920s national directory of public and private schools<sup>19</sup> and “Castalian Hall,” on Pratt Street (Resource No. 298) was one of its dormitories. Public elementary and secondary schools were built including the Bath District High School (Resource No. 203) built on South Green Street in 1916. The former high school has been converted to a social service center and the community’s other school buildings are located outside the district.

The community’s economy was somewhat stabilized with the development of the aforementioned early twentieth-century industrial initiatives, although the community remained essentially a rural small town. Its fortunes depended upon its position as the county seat and commercial center of the county, with a modest industrial base and a long history as a resort community, though certainly not on a scale with communities such as Saratoga Springs or Cape May.

The community never grew substantially beyond its high point at the time of the heyday of the resort ambience, and fire continued to be the resort town’s worst enemy. The Fairfax Inn burned in 1901 and its Annex in 1912. The Dunn Hotel, erected in 1903, lasted only until 1935 when it burned. In 1974, the 1905 Washington Hotel and a row of adjacent commercial buildings were destroyed, and in 2006 the 1908 Morgan County Court House burned.

The 2000 Census recorded a population of 663, and although several fires have destroyed some of Berkeley Springs’ historic architecture, the community retains much of its historic character and the park and spring remain popular tourist destinations. The aforementioned Park View Inn (Resource No. 108) remains in full operation and, indeed, has undergone several additions. Other properties have been converted for use as bed-and-breakfast inns, catering to the continuing traffic of those who come to “take the waters.” In the downtown, a sprightly commercial/tourist trade has developed with shops and restaurants targeting those who, like Washington in 1748 come to “y. Fam'd Warm Springs.”

**Applicable National Register Criteria**

Criterion A

The Town of Bath Historic District meets National Register Criterion A for its close association with the patterns of commerce, health/medicine, and community planning/development. With respect to commerce, the

Section Number 8 Page 63

---

district has served as the commercial hub of the county since its initial establishment in the 1770s. Morgan is a rural county with few incorporated communities (Bath and Paw Paw). The town's earliest commercial buildings were rudimentary at best, and were first replaced by wood frame buildings, some of which either burned or were removed and were replaced by significantly more substantial and permanent masonry buildings. These building, primarily along North Washington and Fairfax Streets, contain a variety of shops which catered to--and continue to serve--both the local population and the tourists who came here to avail themselves of the springs.

The district's Criterion A significance in the area of health/medicine is established by the presence of the Springs and their immediate environs, referred to on the 1913 *Sanborn Fire Insurance Map* as "Berkeley Springs Grove." As noted above, since the eighteenth century the Springs have been a sought-after venue for those with myriad maladies and indeed, the architecture of the district strengthens the Criterion A association of the district in that many of the district's buildings, large and small, from those on a scale with the Park View Inn to small-scale summer cottages, attest to the popularity of the healing waters which continue to flow at the foot of Warm Springs Ridge. Berkeley Springs State Park was listed in the National Register in 1976.

The district is also significant in the area of community planning, since the Town's founders laid out a planned community in the seventh decade of the eighteenth century, including a carefully-designed grid of lots clustered around the Town Square which contained the Springs. The plat included regularly-shaped rectilinear lots, bisected by streets and alleys running north-south and east-west. The plan was drawn by Alex Stephens (whose brother, Adam, laid out Martinsburg in neighboring Berkeley County), along with Richard Riggs, and Thomas Bryan Martin, the latter of whom was Lord Fairfax's nephew. The requirements of the legislative Act creating the town called for homes to be erected within a certain time period and for the buildings to be of a specific minimum dimension, far simpler but nonetheless reflective of the covenants which have been placed in new subdivisions beginning with the planned communities of the 1880s and after.<sup>20</sup>

Criterion C

The district is significant under Criterion C for *architecture* since it contains examples of many of the styles of design which were popular throughout much of its period of Significance. These styles include the Federal,

---

<sup>20</sup>A well-documented study of such community planning is found in David L. Ames and Linda Flint McClelland, "Historic Residential Suburbs: Guidelines for Evaluation and Documentation for the National Register of Historic Places," National Register Bulletin (Washington, DC: National Park Service, 2002).

Italianate, Queen Anne, Neo-Classical Revival, Mission, Colonial and Dutch Colonial Revival, Tudor Revival, Stick, and Craftsman. Specific examples of these styles appear in Section 7.

Bath is the largest community in Morgan County and the Town of Bath Historic District contains the largest concentration of domestic, commercial, and industrial architecture in the entire county. It is unique in the Eastern Panhandle in that while the other Panhandle county seats of Martinsburg (pop. 16,500) and Charles Town (pop. 3,869) grew and prospered significantly with railroad activity, industrial development, and the economic well-being brought on by the orchard industry of the Shenandoah Valley, Bath and Morgan County are far more rugged and isolated. Charles Town and Martinsburg—the Jefferson and Berkeley county seats—as well as Shepherdstown (pop. 803) on the Potomac River, are typified by substantial neighborhoods with street after street lined with domestic architecture and commercial buildings. Paw Paw is the only other incorporated community in Morgan County and with a 2000 population of little more than 500 is smaller even than Bath, at 663.

Summarizing, the Town of Bath Historic District is significant and meets National Register Criterion A for its association with the patterns of health/medicine, commerce, and community planning, and Criterion C for architecture. The district retains integrity in all of its composite qualities and retains much of the appearance which it had at the end of the 1776-1959 Period of Significance.

containing the United Methodist Church to a point on East Liberty Street opposite the northeast corner of the lot containing 11 Pratt Street (Resource No. 295); then southerly along the rear property lines of the properties facing Pratt Street c. 250' to the north curblineline of East Market Street; then westerly along the north curblineline of East Market Street c. 410' to the west curblineline of Pratt Street; then southerly along the west curblineline of the unopened portion of Pratt Street c. 425' to the south curblineline of College Avenue; then easterly along the south curblineline of College Avenue c. 375' to the western curblineline of Ewing Street; then southerly along the western curblineline of Ewing Street c. 200' to the northern curblineline of Dawson Street; then westerly along the northern curblineline of Dawson Street c. 375' to a point opposite the northeastern corner of the lot containing the property at 99 Martinsburg Road (Resource No. 307); then easterly c. 425' along the rear property lines of the properties facing Martinsburg Road to the western curblineline of Ewing Street; then southerly along the western curblineline of Ewing Street c. 100' to the northern curblineline of Martinsburg Road; then easterly along the northern curblineline of Martinsburg Road c. 100' to a point opposite the eastern property line of 206 Martinsburg Road (Resource No. 317); then southerly, crossing Martinsburg Road and continuing a total of c. 125 along the eastern lot line of the lot containing 206 Martinsburg Road (Resource No. 317) to the northern curblineline of Biser Street; then westerly and northerly c. 750' along the rear property lines of the properties facing Martinsburg Road to the northeast corner of the property at 283 South Washington Street (Resource No. 76); then southerly along the rear property lines of the properties facing South Washington Street c.625 ' to the northern curblineline of an unnamed alley; then westerly along the northern curblineline of said unnamed alley c. 375' to the place of beginning.

<b>BOUNDARY JUSTIFICATION</b>
-------------------------------

The boundaries for this historic district incorporate those historic resources within the municipal boundaries of the Town of Bath. The areas north of the nominated area contain properties which lie outside the original town plan of Bath and are less than fifty years of age. Warm Springs Ridge, west of the district, is a precipitous hillside and creates a natural geographical boundary for the district, and the area south of the district along Route 522 contains a modern high school campus and commercial strip development. The boundaries were drawn to exclude non-contributing resources to the greatest extent possible.

The diagram illustrates the structure of a test specimen. The top portion is a cross-sectional view showing a central hole with a diameter of  $\frac{1}{2}$ . The bottom portion is a longitudinal section showing the specimen's length and internal features. Dimensions are marked as 1000, 0, 1000, 2000, and 3000. Below these dimensions, the labels '1' and '5' are positioned, likely indicating different material regions or components.
