8. Statement of Significance

Applicable National Register Criteria

(Mark "X" in one or more boxes for the criteria qualifying the property for National Register listing.)

A Property is associated with events that have made a significant contribution to the broad patterns of our history.

B Property is associated with the lives of persons significant in our past.

C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

D Property has yielded, or is likely to yield, information important in prehistory or history.

Weston & Gauley Bridge Turnpike
Name of Property

Braxton County, WV
County and State

Criteria Considerations

(Mark "X" in all the boxes that apply.)

Property is:

A owned by a religious institution or used for religious purposes.

B removed from its original location.

C a birthplace or grave.

D a cemetery.

E a reconstructed building, object, or structure.

F a commemorative property.

G less than 50 years of age or achieved significance within the past 50 years.

Braxton County, WV
County/State

Section number 7 Page 2

Description of the property

The nominated section of the Weston and Gauley Bridge Turnpike begins at the Little Kanawha River near the Bulltown Historical Area and ends about one mile from the Stonewall Jackson Lake property. This section of the historic turnpike is approximately 10 miles long. The surface of the old turnpike is currently just a dirt surface, with the road generally following the ridgeline and the slope of the terrain. The present condition of the old turnpike, now a trail, is cleared and open. The U.S. Government purchased additional property, containing a later access trail, along the ridge top to Stonewall Jackson Lake to provide additional access to the old turnpike. Both the old turnpike and this newer access trail are within the boundaries of the nominated sections. The 1.5 mile access trail is a noncontributing section.

Long sections of the old Weston and Gauley Bridge Turnpike were incorporated into what is now U.S. 19, and were paved in the 1920s. The new road was located in the valleys, thus leaving several lengthy sections of the old turnpike in original condition.

While there may be other significant sections of the road, this original section represents one of the longest sections in public ownership available for hiking in an unpaved condition. This 10 mile section is approximately 20 feet in width. For most of the trail, it passes through a heavily wooded area. The right-of-way section between Burnsville Lake and Stonewall Jackson Lake has farmland on either side for long stretches.

There are some wet and overgrown areas along the length of the trail. The Corps of Engineers placed approximately 5.5 miles of protective fencing along the trail from Burnsville Lake property line past Mt. Hope Church to the Stonewall Jackson property line during the construction of Burnsville Lake in an effort to protect and preserve the trail from improper use by ATV's and four wheel drive vehicles.

At the southern end of the trail by the lake's edge and the present beach, near the Bulltown Historical Area, is the site where an old covered bridge stood during the years the turnpike was in service. The stonework foundation for the bridge abutment still remains and is underwater during the summer recreational pool. The abutment is composed of large, approximately 2x2x4 foot, blocks of sandstone used to support one end of a former covered bridge. Holes in the top course can be compared to supports for a metal railing found in photographs from the late 19th century. The abutment is considered a contributing structure for the turnpike and is one of the few remaining features.

The section of the road beginning near the lake's edge, and passing through the Bulltown Historical Area is basically in good condition except for an area near the Cunningham House where the drainage is poor. From there part of the old turnpike near the Bulltown Historical Area is now part of County Route 19/12, which is still in use and unpaved (approximately 1.4 miles).

Volunteers have cleared the trail from Big Knawl Creek north to Mt. Hope Church. North of Mt. Hope Church, the road has some areas in excellent condition, while there are some

wet areas along the right of way and abundant multiflora in the area. Volunteers keep the access trail section cleared, with its scenic views of the rolling farmlands.

In summary, the old turnpike is in good condition with an unpaved surface. It is accessible from both ends of the nominated section, and is open to hikers.

Statement of Significance

The Weston and Gauley Bridge Turnpike is significant under Criteria A for Transportation. The road served as an early transportation route for developing commerce in Braxton and surrounding counties. Farmers used the road to transport their products to grist and sawmills located in Sutton, and provided access to the salt industry in the Bulltown area. Both Union and Confederate forces transported equipment and soldiers on the road during the Civil War. The period of significance, which reflects its heavy usage, is 1849-1917.

The wild and largely unsettled region of western Virginia was opened up by the building of the Weston and Gauley Bridge Turnpike. The bold undertaking began in 1847 with limited resources and lack of local engineering experience. Built in response to local institutions, the road became a part of a regional road system providing a connection for commercial and industrial development. The entire length of the Weston and Gauley Bridge Turnpike was only about 110 miles. It ran through a very rugged part of the Appalachians along the ridges of the hills, and was used by the troops of both sides during the Civil War.

By the 1840's the population in Lewis, Braxton, and Nicholas counties had increased enough to warrant the need and make possible the construction of a north-south road. It was necessary to construct a road for farmers to transport their products to the important grist and sawmills located in Sutton, county seat for Braxton. Access to the salt industry in the Bulltown area added to the traffic. Individual subscribers took stock in the turnpike company and \$12,000 was raised. Stockholders appointed a Board of Directors at the first meeting of the stockholders at the Braxton County Courthouse in Sutton in 1848. Their first president, Felix Sutton, remained president and John Byrne remained treasurer until the road was completed. However, the five directors changed frequently. The Board of Directors were criticized for mismanagement and incompetence. Inexperience and vested interests contributed to poor decisions on the part of the Company, and private interests prevailed over public good at times. Interested landholders worked to influence the location of the road to their benefit. Although not all were self-serving, the directors appeared to have favored friends and relatives for construction contracts. Sutton was praised as "an honest man but very easily imposed upon". The company constructed the Weston and Gauley Bridge Turnpike between 1849 and 1858.

The road was fifteen feet wide and cleared to thirty feet. It was not macadamized over its entire length, but the earth surface maintained by a horse-drawn drag. Small sections around the principal towns were macadamized and built under separate contracts. The first contracts were let in 1849 with the cost of construction varying from \$310 to \$405 per mile. By 1858 the road was completed and under toll except for eleven miles at the south end which had not yet been accepted by the road commissioners. The final accounting showed the cost of construction averaging \$446.59 per mile. The more difficult sections were built last. The road had a variety of bridges with both covered bridge and suspension bridge designs being represented. The company built no toll houses but used turnpike bars instead.

The tolls barely paid for the repairs to the road and it was never profitable. Use of the road during the Civil War almost completely ruined it by the ruts created by wagons and horses traversing the road, and little or no repairs. Any chance for profit was lost by the Weston and Gauley Bridge Turnpike Company because of the condition of the road and the lack of money to repair it.

During the Civil War, the Union used the Weston and Gauley Bridge Turnpike to move troops from the north in a flanking movement to take control of western Virginia. In August of 1861, Colonel Tyler left Weston with the Seventh Ohio Regiment and marched down the turnpike. They met with little resistance, but were troubled with bushwackers at Powell's Mountain in Nicholas County. General Rosecrans brought more federal troops down the turnpike to Sutton September 1861. They fought a battle at Carnifex Ferry and, in November, at Gauley Bridge which left the Union in control of the Kanawha Valley. During 1861, Rosecrans had assembled more than 10,000 Union troops at Clarksburg, and had a line of Union command posts (with a regiment or two each) all along the Weston and Gauley Bridge Turnpike at Weston, Bulltown, Sutton, Summersville, and Gauley Bridge. The future president, Rutherford B. Hayes, described "sweeping down Gauley pike" as a private in the Twenty-third Regiment, Ohio Volunteer Infantry to first join the Rosecrans' forces at Bulltown. He described the countryside as wild and rugged. For the remainder of the war, West Virginia was largely in the control of Union forces. The Confederates did try several attempts to break through from the east. The turnpike was reported in bad condition from the retreating wagon trains. Although the turnpike was used mainly for the movement of troops, there was some fighting along its way. There was a small engagement at Bulltown on October 13, 1863.

The Union had fortified a site early in the war on a hill on the north side of the Little Kanawha overlooking Bulltown, probably to protect the river crossing on the turnpike. (Remnants of the fortifications are still extant.) The "fort" was occupied by about 400 Union soldiers under Captain William Mattingly. They were attacked by Confederate troops led by Colonel William Jackson. Surrounded, the Union troops refused to surrender, and sent for help to Clarksburg and Weston. The Confederates camped for the night at Salt Lick Bridge. The next day, Union reinforcements arrived from Clarksburg and forced the Confederates to retreat along the Weston and Gauley Bridge Turnpike.

The Weston and Gauley Bridge Turnpike deteriorated quickly from the constant use, and there was no means to keep it repaired during the war.

The new state of West Virginia (formed in 1863) did not have the means to construct and repair roads and bridges. In 1866, the West Virginia state legislature transferred all turnpike roads and bridges to the counties. What became of the Weston and Gauley Bridge Turnpike is not clear. The road remained in some type of use until the formation of the State Road Commission in 1917.

A major change occurred in the 1920's when there was a movement to develop new hard surfaced roads to replace the old muddy roads. According to *A History of Weston and Gauley Bridge Turnpike*, "the Weston and Gauley Bridge Turnpike, together with its tributary roads, did establish the road pattern for the area which has changed very little until the recent construction of Interstate Route 79".

The Weston and Gauley Bridge Turnpike was an important link in establishing an early road system in West Virginia. Other roads were built to connect to the turnpike and provide a system of transportation in the region. Because the new road, U.S. 19, followed the valleys instead of the ridges where the old turnpike was located; several sections remain in essentially original condition including the section nominated. The turnpike reflects the movement in West Virginia to establish land routes for transportation.

Weston & Gauley Bridge Turnpike
Name of Property

Braxton County, WV
County/State

Section number 10

Page 3

BOUNDARY DESCRIPTION

The boundary of the nominated property is approximately a ten mile long section of the old Weston and Gauley Turnpike beginning at the old Bulltown Covered Bridge abutment (which is underwater when the lake is at the summer recreational pool level) near the Bulltown Historical Area at Burnsville Lake. The road passes through the Bulltown Historical Area and becomes part of County Road 19/12 for 1.4 miles. It continues to Little Knawl Creek and on to the project boundary to the north. From the boundary, the road continues on through the woods and along the Corps' property right-of-way (owned in fee) to Mt. Hope Church for approximately two miles. The turnpike boundary crosses the unpaved Glover Fork County Road at Mt. Hope Church and continues along the ridge line to Chapman Road for another two miles. At that point, a 1.5 mile access road (noncontributing element runs from Chapman Road to Stonewall Jackson Lake's property line. The turnpike road is approximately twenty feet wide on the Burnsville Lake Property. The turnpike section from the Burnsville Lake property line to Chapman Road, and the last 1.5 mile access trail, are approximately sixty feet wide and fenced.

BOUNDARY JUSTIFICATION

Except for a small section, the Weston and Gauley Bridge Turnpike is owned in fee by the U.S. Government as a part of the Burnsville Lake Project from the Little Kanawha River to the Stonewall Jackson Lake property line. A small section, approximately 1.4 miles long, near the Bulltown Historical Area is part of County Route 19/12. A Corps owned access section connects from the turnpike at Chapman Road to the north, with the Stonewall Jackson Lake property, and another section of the old turnpike road, which is outside of the boundaries for this nomination.
